# Contents

**Preface** ix

1 **Inverse Scattering in Two Dimensions** 1
   1.1 Introduction ........................................ 1
   1.2 Classical Inversion Techniques ....................... 4
   1.3 The Linear Sampling Method .......................... 7
   1.4 Regularization of the LSM ........................... 9
   1.5 Numerical Results in Two Dimensions ................. 11
      1.5.1 Scattering by a Circular Cylinder ............. 12
      1.5.2 Two Scatterers Using Synthetic Data ........... 14
      1.5.3 Real Data ................................... 16

2 **Maxwell’s Equations** 19
   2.1 The Scattering of Electromagnetic Waves .............. 19
   2.2 The Stratton–Chu Formulae and Their Application ...... 21
   2.3 Vector Wave Functions and Electromagnetic Herglotz Pairs 25

3 **The Inverse Scattering Problem for Obstacles** 29
   3.1 A Uniqueness Theorem ............................... 30
   3.2 Approximation Properties of Electromagnetic Herglotz Pairs 32
   3.3 The Linear Sampling Method .......................... 38
   3.4 Limited Aperture Data ................................ 45
   3.5 Numerical Examples in Three Dimensions .............. 46
      3.5.1 A Disconnected Scatterer: Two Balls ........... 47
      3.5.2 The Teapot ................................... 49
      3.5.3 Impedance Cube ................................ 49
      3.5.4 Reconstruction of $\lambda$ and Limited Aperture ........ 50

4 **The Inverse Scattering Problem for Anisotropic Media** 53
   4.1 Uniqueness Theorems ................................ 55
   4.2 The Interior Transmission Problem .................... 69
   4.3 Determination of the Support ........................ 76
   4.4 A Lower Bound for $\|N\|_2$ ........................... 80
   4.5 The Existence of Transmission Eigenvalues ............ 83
   4.6 Partially Coated Objects ............................ 89
viii  Contents

5     The Inverse Scattering Problem for Thin Objects  93
    5.1  Scattering by Thin Objects .......................... 93
    5.2  Approximation Theorems ............................. 97
    5.3  Solution of the Inverse Problem ...................... 99
    5.4  Numerical Reconstruction of Screens .................. 105

6     The Inverse Scattering Problem for Buried Objects  107
    6.1  Scattering by Buried Objects .......................... 108
    6.2  Near Field Data .................................... 110
    6.3  The Reciprocity Gap Functional Method ............... 112
    6.4  Numerical Reconstruction of Buried Objects ............ 126

Bibliography  129
