List of Figures	xi
List of Tables	xv
List of Algorithms	xvii
Preface	xix
1 Introduction	1
2 Optimality Conditions	3
2.1 Introduction	3
2.2 Optimality Conditions	3
2.3 The Formal Lagrangian Approach	17
2.4 Control Constraints	22
3 Discretization of Optimality Systems	27
3.1 Introduction	27
3.2 Discretization of Elliptic Optimization Problems	28
3.3 Discretization of Parabolic Optimization Problems	34
3.4 Discretization of Optimization Problems with Integral Equations	37
4 Single-Grid Optimization	41
4.1 Introduction	41
4.2 Black-Box Methods	41
4.2.1 Steepest Descent and NCG Methods	43
4.2.2 Quasi-Newton Methods	45
4.2.3 Krylov–Newton Methods	47
4.2.4 Cascadic Black-Box Schemes	48
4.3 Semismooth Newton Methods	49
4.4 Preconditioning	53
4.5 SQP Methods and Variants	59
4.6 Reduced SQP and One-Shot Methods	62
5 Multigrid Methods	67
5.1 Introduction	67

5.2	Multigrid Methods for Linear Problems	67
5.2.1	Iterative Methods and the Smoothing Property	68
5.2.2	Iterative Methods as Minimization Schemes	72
5.2.3	The Twogrid Scheme and the Approximation Property	74
5.2.4	The Multigrid Scheme	79
5.2.5	The Algebraic Multigrid Method	84
5.3	Multigrid Methods for Nonlinear Problems	87
5.3.1	The FAS Multigrid Method	87
5.3.2	The Full Multigrid Method	89
5.4	The Multigrid Optimization Scheme	92
5.4.1	Convergence of the MGOPT Method	94
5.4.2	The Construction of the MGOPT Components	97
5.5	Multigrid and Reduced SQP for Parameter Optimization	99
5.6	Schur-Complement-Based Multigrid Smoothers	101
5.7	The Collective Smoothing Multigrid Approach	106
5.7.1	CSMG Schemes for Elliptic Control Problems	108
5.7.2	Algebraic Multigrid Methods for Optimality Systems	125
5.7.3	A CSMG Scheme with FEM Discretization	133
5.7.4	CSMG Schemes for Parabolic Control Problems	142
5.7.5	Projected Collective Smoothing Schemes and the Semismooth Newton Method	163
5.7.6	Multigrid Receding-Horizon Approach	167
5.7.7	A CSMG Scheme for Fredholm Control Problems	169
5.7.8	Optimization Properties of the CSMG Scheme	174
6	PDE Optimization with Uncertainty	177
6.1	Introduction	177
6.2	PDE Control Problems with Uncertain Coefficients	179
6.2.1	Discretization of the Probabilistic Space	182
6.2.2	Sparse-Grid CSMG Methods	183
6.2.3	Experiments with a Parabolic Control Problem	184
6.3	Aerodynamic Design under Geometric Uncertainty	186
6.3.1	Modeling Geometric Uncertainty	186
6.3.2	Semi-infinite Robust Design	187
6.3.3	The Use of a Goal-Oriented KL Basis	188
6.3.4	Adaptive Sparse Grids for High-Dimensional Integration	188
6.3.5	Numerically Computed Robust Aerodynamic Designs	189
6.4	A Proper Orthogonal Decomposition Framework to Determine Robust Controls	190
6.4.1	POD Analysis of the Control Space	193
6.4.2	A Robust Control for Elliptic Control Problems	195
6.5	Optimal Control of Probability Density Functions of Stochastic Processes	196
6.5.1	A Fokker–Planck Optimal Control Formulation	199
6.5.2	An RH-MPC Scheme	200
6.6	Bayesian Uncertainty Quantification	202
6.6.1	Statistical Inverse Problems	203
6.6.2	A Fast Scheme for Large-Scale Linear Inverse Problems	204

6.6.3	An Inverse Parabolic Problem	207
7	Applications	209
7.1	Introduction	209
7.2	Aerodynamic Shape Design Supported by the Shape Calculus	210
7.2.1	Overview on Shape Sensitivity Analysis	210
7.2.2	The Hadamard Formula	211
7.2.3	Shape Optimization and the Incompressible Navier–Stokes Equations	212
7.2.4	Shape Hessian Approximation and Operator Symbols	213
7.2.5	Aerodynamic Design Using Shape Calculus	216
7.3	Quantum Control Problems	219
7.3.1	Introduction to Quantum Control Problems	219
7.3.2	Finite-Level Quantum Systems	220
7.3.3	Infinite-Dimensional Quantum Systems	224
7.4	Electromagnetic Inverse Scattering	237
7.4.1	Introduction	237
7.4.2	The Scattering Problem in the Time Domain	238
7.4.3	The Maxwell Curl Equations	242
7.4.4	The FDTD Discretization	244
7.4.5	Perfectly Matched Layer	248
7.4.6	An Inverse Scattering Scenario	253
	Bibliography	255
	Index	281
