Preface	ix
I Design Fundamentals	1
1 A Continuation Paradigm	3
1.1 Problem formulation	3
1.2 An analytical solution	3
1.3 A numerical solution	9
1.4 Conclusions	14
Exercises	14
2 Encapsulation	19
2.1 Solution measures and constraints	20
2.2 Continuation problems	23
2.3 Algorithm development	28
2.4 Conclusions	31
Exercises	32
3 Construction	37
3.1 Problem decomposition	37
3.2 Staged construction	42
3.3 The core interface	45
3.4 Conclusions	63
Exercises	64
4 Toolbox Development	69
4.1 Toolbox constructors	70
4.2 Embeddability	81
4.3 Object-oriented design	86
4.4 Conclusions	91
Exercises	92
5 Task Embedding	95
5.1 Tree decompositions	95
5.2 A composite toolbox	98

5.3	Toolbox settings	108
5.4	Conclusions	114
	Exercises	114
II	Toolbox Templates	119
6	Discretization	121
6.1	The collocation zero problem	122
6.2	Vectorization	124
6.3	A vectorized zero problem	136
6.4	Conclusions	140
	Exercises	141
7	The Collocation Continuation Problem	147
7.1	Problem definition	147
7.2	Encoding	150
7.3	Examples	157
7.4	Conclusions	178
	Exercises	179
8	Single-Segment Continuation Problems	183
8.1	Boundary-value problems	184
8.2	Periodic orbits	191
8.3	Alternative embeddings	200
8.4	Conclusions	206
	Exercises	207
9	Multisegment Continuation Problems	213
9.1	Boundary-value problems	213
9.2	Quasi-periodic invariant tori	218
9.3	Multisegment periodic orbits	226
9.4	Conclusions	244
	Exercises	245
10	The Variational Collocation Problem	251
10.1	The first variational equation	251
10.2	A variational zero problem	264
10.3	Candidate boundary conditions	285
10.4	Conclusions	287
	Exercises	288
III	Atlas Algorithms	295
11	Covering Manifolds	297
11.1	Theory and terminology	297
11.2	A finite-state machine	307

11.3	An object-oriented implementation	311
11.4	Conclusions	315
	Exercises	315
12	Single-Dimensional Atlas Algorithms	319
12.1	An advancing local cover	320
12.2	Adaptation and accelerated convergence	328
12.3	An expanding-boundary algorithm	332
12.4	Conclusions	339
	Exercises	340
13	Multidimensional Manifolds	343
13.1	A point-cloud algorithm	343
13.2	A chart network	348
13.3	Henderson's algorithm	354
13.4	Conclusions	363
	Exercises	364
14	Computational Domains	367
14.1	A 1-dimensional atlas algorithm	368
14.2	A 2-dimensional atlas algorithm	374
14.3	Manifolds of resonant periodic orbits	378
14.4	Conclusions	380
	Exercises	382
IV	Event Handling	383
15	Special Points and Events	385
15.1	Theoretical framework	385
15.2	A continuation paradigm	394
15.3	The core interface	397
15.4	Conclusions	405
	Exercises	405
16	Atlas Events and Toolbox Integration	411
16.1	Event detection in atlas algorithms	411
16.2	A toolbox template	421
16.3	An alternative constructor	431
16.4	Conclusions	433
	Exercises	434
17	Event Handlers and Branch Switching	439
17.1	Toolbox event handlers	440
17.2	Bifurcations of periodic orbits	448
17.3	Branch switching	458
17.4	Conclusions	468
	Exercises	468

V	Adaptation	473
18	Pointwise Adaptation and Comoving Meshes	475
18.1	A brute-force approach	476
18.2	(Co)moving meshes	486
18.3	A comoving-mesh algorithm	490
18.4	Conclusions	502
	Exercises	504
19	A Spectral Toolbox	509
19.1	The spectral continuation problem	509
19.2	Encoding	517
19.3	Adaptivity	523
19.4	Conclusions	527
	Exercises	528
20	Integrating Adaptation in Atlas Algorithms	533
20.1	Adaptive mesh refinements	533
20.2	Boundary-value problems	544
20.3	Numerical comparisons	557
20.4	Conclusions	566
	Exercises	567
VI	Epilogue	571
21	Toolbox Projects	573
21.1	Calculus of variations	573
21.2	Nonlinear boundary conditions	575
21.3	Connecting orbits	576
21.4	Conclusions	577
	Exercises	577
	Index	581
