- actuator characteristics, 104
- beam and ball experiment, 136
  - equations of motion, 137
  - peaking, 136
  - real-time implementable control, 142
  - simulation results, 143
  - singularly perturbed form, 140
- benefits
  - composite control, 52
  - indirect manifold
    - construction approach, 90
  - modified composite control, 75
  - sequential designs, 104
  - simultaneous slow and fast state tracking, 200
- boundary layer system, 25
- center manifold theory, 58
- Commander 700 aircraft, 1, 14
- composite control, 42
  - analysis of, 46
  - benefits of, 52
  - examples of, 47
  - fast control component, 45
  - limitations of, 52
  - main result, 46
  - motivation, 43
  - series DC motor, 48
  - slow control component, 45
- composite Lyapunov function
  - approach, 35
  - for analysis of composite control, 46
  - for analysis of sequential designs, 84, 118
  - interconnection conditions, 38
  - robustness measure, 48, 80
  - stability, 80
- continuous-systems types, 104
- control
  - of nonstandard form
    - multiple time scale systems, 109
    - two time scale systems, 77
  - of standard form
    - with isolated manifold, 42
    - with multiple manifolds, 53
- control designs, 106
- control techniques
  - comparison, 104
  - properties, 104
  - sequential designs, 77
    - multiple time scale systems, 109
    - two time scale systems, 78
  - two stage design, 41
    - composite control, 42
    - modified composite, 53
    - simultaneous slow and fast tracking, 187
    - trade-offs, 75
- control using model reduction, 41
  - things to remember, 42
- control with multiple actuators, 91
  - analysis of, 99
  - examples of, 100
  - interconnection conditions, 97
  - main result, 98
  - motivation, 92
- conventional take-off and landing aircraft, 169
  - equations of motion, 172
  - nonminimum phase properties, 172
- real-time implementable control, 176
- simulation results, 179
- singularly perturbed form, 175
- convergence characteristics, 104
- enzyme kinetics, 2
  - indirect manifold
    - construction approach, 88
  - modified composite control, 66
  - simultaneous slow and fast state tracking, 194
  - singularly perturbed form, 15
- F/A-18 HARV (High Angle-of-Attack Research Vehicle), 207
  - modified composite control, 66, 70
  - simultaneous slow and fast state tracking, 195
- fast actuator system, 110
- fast control component, 191
  - composite control, 45
  - modified composite control, 60
- fast state, 15, 203
- fast system, 29
- fast time scale, 29
- feedback gain selection, 80
  - for robustness, 80
  - for stability, 37, 80
- forced singular perturbation method, 18
  - beam and ball experiment, 140
  - conventional take-off and landing aircraft, 175
  - unmanned helicopter, 153
- four time scale system, 125

- gauge functions, 204
- geometric singular perturbation theory, 29
- hover control, 145
- indirect manifold construction
  - approach, 78
  - analysis of, 84
  - benchmark nonstandard form, 85
  - benefits of, 90
  - examples of, 84
  - handling multiple controller speeds, 91
  - limitations of, 91
  - main result, 83
  - modified composite control, comparison with, 88
  - modified enzyme kinetics, 88
  - motivation, 78, 81
  - sequential nature, 91
- interconnection conditions, 38
  - for capturing effect of singular perturbation parameter, 83, 97
  - for capturing initial transient error, 97
  - for capturing initial transient error, 83
  - for handling multiple controllers, 97
- internal dynamics, 131
- inverted pendulum on a cart, 8
  - singularly perturbed, 18
- limitations
  - composite control, 52
  - indirect manifold construction approach, 91
  - modified composite control, 75
  - sequential designs, 104
  - simultaneous slow and fast state tracking, 200
- modeling time scale systems, 14
  - beam and ball experiment, 140
  - conventional take-off and landing aircraft, 175
  - unmanned helicopter, 153
- modified composite control, 53
  - analysis of, 65
    - with exact manifold information, 66
  - benefits of, 75
  - essential ideas, 55
  - examples of, 66
  - fast control component, 60
  - indirect manifold construction approach, comparison with, 88
  - limitations of, 75
  - main results, 64
    - regulation, 66
  - manifold approximation, 58
