List of Figures vii

Preface xiii

1 Unsteady (nonautonomous) flows 1
- 1.1 Unsteady flows versus steady flows . . . 1
- 1.2 Importance in geophysical flows . . . 9
- 1.3 Importance in micro/nanofluidic flows . . . 13
- 1.4 Unsteady flow barriers: introduction . . . 15
- 1.5 Quantifying unsteady transport: introduction . . . 26
- 1.6 Hyperbolic trajectories and exponential dichotomies . . . 30

2 Melnikov theory for stable and unstable manifolds 35
- 2.1 Classical Melnikov results . . . 35
- 2.2 Nonautonomously perturbed 2D flows . . . 40
- 2.3 Unstable manifolds for non-area-preserving 2D flows . . . 45
- 2.4 Stable manifolds for non-area-preserving 2D flows . . . 60
- 2.5 Tangent vectors to invariant manifolds . . . 67
- 2.6 Jump discontinuities . . . 71
- 2.7 Impulsive discontinuities . . . 74
- 2.8 Finite-time invariant manifolds . . . 93

3 Quantifying transport flux across unsteady flow barriers 103
- 3.1 Classical results for time-periodic flow: lobe dynamics . . . 103
- 3.2 Flux definition for general time-dependence . . . 108
- 3.3 Flux as a Melnikov integral . . . 113
- 3.4 Flux function for time-harmonic perturbations . . . 129
- 3.5 Fourier flux formulae for general time-periodicity . . . 137
- 3.6 Flux for impulsive perturbations . . . 143
- 3.7 Flux for nonheterolinic flow barriers . . . 150
- 3.8 Transport due to fluid viscosity . . . 159

4 Optimizing transport across flow barriers 173
- 4.1 Flux measures for time-harmonic incompressible flows . . . 173
- 4.2 Optimal frequency . . . 177
- 4.3 Optimal energy-constrained flow protocol . . . 181
- 4.4 Optimization for nonheteroclinic flow barriers . . . 187

5 Controlling unsteady flow barriers **197**
5.1 Leading-order hyperbolic trajectory control in $\mathbb{R}^2$ 197
5.2 Higher-order hyperbolic trajectory control in $\mathbb{R}^n$ 203
5.3 Control of local stable/unstable manifolds 212
5.4 Controlling global stable/unstable manifolds 218

Bibliography **235**
