| Preface to the Revised Edition                                | xi         |
| Preface   | xiii       |
| Acknowledgments   | xvii       |
| <b>1 Introduction</b>   | <b>1</b>   |
| 1.1 Modeling . . . . .  | 1          |
| 1.2 What Are Differential Equations? . . . . .                | 2          |
| 1.3 One-Dimensional Dynamics . . . . .                        | 5          |
| 1.4 Examples . . . . .  | 8          |
| 1.5 Two-Dimensional Dynamics . . . . .                        | 13         |
| 1.6 The Lorenz Model . . . . .                                | 18         |
| 1.7 Quadratic ODEs: The Simplest Chaotic Systems . . . . .    | 20         |
| 1.8 Exercises . . . . .                                       | 21         |
| <b>2 Linear Systems</b>                                       | <b>27</b>  |
| 2.1 Matrix ODEs . . . . .                                     | 27         |
| 2.2 Two-Dimensional Linear Systems . . . . .                  | 33         |
| 2.3 Exponentials of Operators . . . . .                       | 38         |
| 2.4 Fundamental Solution Theorem . . . . .                    | 42         |
| 2.5 Complex Eigenvalues . . . . .                             | 45         |
| 2.6 Multiple Eigenvalues . . . . .                            | 46         |
| 2.7 Linear Stability . . . . .                                | 53         |
| 2.8 Nonautonomous Linear Systems and Floquet Theory . . . . . | 57         |
| 2.9 Exercises . . . . .                                       | 63         |
| <b>3 Existence and Uniqueness</b>                             | <b>69</b>  |
| 3.1 Set and Topological Preliminaries . . . . .               | 69         |
| 3.2 Function Space Preliminaries . . . . .                    | 72         |
| 3.3 Existence and Uniqueness Theorem . . . . .                | 80         |
| 3.4 Dependence on Initial Conditions and Parameters . . . . . | 89         |
| 3.5 Maximal Interval of Existence . . . . .                   | 94         |
| 3.6 Exercises . . . . .                                       | 97         |
| <b>4 Dynamical Systems</b>                                    | <b>101</b> |
| 4.1 Definitions . . . . .                                     | 101        |
| 4.2 Flows . . . . .   | 103        |
| 4.3 Global Existence of Solutions . . . . .                   | 105        |

|          |  |            |
|----------|--|------------|
| 4.4      | Linearization . . . . .                                | 108        |
| 4.5      | Stability . . . . .                                    | 111        |
| 4.6      | Lyapunov Functions . . . . .                           | 118        |
| 4.7      | Topological Conjugacy and Equivalence . . . . .        | 124        |
| 4.8      | Hartman–Grobman Theorem . . . . .                      | 132        |
| 4.9      | Omega-Limit Sets . . . . .                             | 137        |
| 4.10     | Attractors and Basins . . . . .                        | 142        |
| 4.11     | Stability of Periodic Orbits . . . . .                 | 146        |
| 4.12     | Poincaré Maps . . . . .                                | 148        |
| 4.13     | Exercises . . . . .                                    | 153        |
| <b>5</b> | <b>Invariant Manifolds</b>                             | <b>159</b> |
| 5.1      | Stable and Unstable Sets . . . . .                     | 159        |
| 5.2      | Heteroclinic Orbits . . . . .                          | 161        |
| 5.3      | Stable Manifolds . . . . .                             | 163        |
| 5.4      | Local Stable Manifold Theorem . . . . .                | 167        |
| 5.5      | Global Stable Manifolds . . . . .                      | 174        |
| 5.6      | Center Manifolds . . . . .                             | 179        |
| 5.7      | Exercises . . . . .                                    | 185        |
| <b>6</b> | <b>The Phase Plane</b>                                 | <b>189</b> |
| 6.1      | Nonhyperbolic Equilibria in the Plane . . . . .        | 189        |
| 6.2      | Two Zero Eigenvalues and Nonhyperbolic Nodes . . . . . | 190        |
| 6.3      | Imaginary Eigenvalues: Topological Centers . . . . .   | 195        |
| 6.4      | Symmetries and Reversors . . . . .                     | 203        |
| 6.5      | Index Theory . . . . .                                 | 205        |
| 6.6      | Poincaré–Bendixson Theorem . . . . .                   | 210        |
| 6.7      | Liénard Systems . . . . .                              | 215        |
| 6.8      | Behavior at Infinity: The Poincaré Sphere . . . . .    | 220        |
| 6.9      | Exercises . . . . .                                    | 228        |
| <b>7</b> | <b>Chaotic Dynamics</b>                                | <b>233</b> |
| 7.1      | Chaos . . . . .  | 233        |
| 7.2      | Lyapunov Exponents . . . . .                           | 238        |
| 7.3      | Strange Attractors . . . . .                           | 249        |
| 7.4      | Exercises . . . . .                                    | 254        |
| <b>8</b> | <b>Bifurcation Theory</b>                              | <b>257</b> |
| 8.1      | Bifurcations of Equilibria . . . . .                   | 257        |
| 8.2      | Preservation of Equilibria . . . . .                   | 260        |
| 8.3      | Unfolding Vector Fields . . . . .                      | 262        |
| 8.4      | Saddle-Node Bifurcation in One Dimension . . . . .     | 267        |
| 8.5      | Normal Forms . . . . .                                 | 271        |
| 8.6      | Saddle-Node Bifurcation in $\mathbb{R}^n$ . . . . .    | 279        |
| 8.7      | Degenerate Saddle-Node Bifurcations . . . . .          | 284        |
| 8.8      | Andronov–Hopf Bifurcation . . . . .                    | 285        |
| 8.9      | The Cusp Bifurcation . . . . .                         | 290        |
| 8.10     | Takens–Bogdanov Bifurcation . . . . .                  | 293        |
| 8.11     | Homoclinic Bifurcations . . . . .                      | 295        |
| 8.12     | Melnikov’s Method . . . . .                            | 300        |

|                     |   |            |
|---------------------|---|------------|
| 8.13                | Melnikov's Method for Nonautonomous Perturbations . . . . .   | 302        |
| 8.14                | Shilnikov Bifurcation . . . . .                               | 310        |
| 8.15                | Exercises . . . . .   | 313        |
| <b>9</b>            | <b>Hamiltonian Dynamics</b>                                   | <b>319</b> |
| 9.1                 | Conservative Dynamics . . . . .                               | 319        |
| 9.2                 | Volume-Preserving Flows . . . . .                             | 321        |
| 9.3                 | Hamiltonian Systems . . . . .                                 | 322        |
| 9.4                 | Poisson Dynamics . . . . .                                    | 326        |
| 9.5                 | The Action Principle . . . . .                                | 328        |
| 9.6                 | Poincaré Invariant . . . . .                                  | 331        |
| 9.7                 | Lagrangian Systems . . . . .                                  | 333        |
| 9.8                 | The Calculus of Variations . . . . .                          | 340        |
| 9.9                 | Equivalence of Hamiltonian and Lagrangian Mechanics . . . . . | 343        |
| 9.10                | Linearized Hamiltonian Systems . . . . .                      | 345        |
| 9.11                | Krein Collisions . . . . .                                    | 349        |
| 9.12                | Integrability . . . . .                                       | 351        |
| 9.13                | Nearly Integrable Dynamics . . . . .                          | 353        |
| 9.14                | Onset of Chaos in Two Degrees of Freedom . . . . .            | 356        |
| 9.15                | Resonances: Single Wave Model . . . . .                       | 361        |
| 9.16                | Resonances: Multiple Waves . . . . .                          | 365        |
| 9.17                | Resonance Overlap and Chaos . . . . .                         | 366        |
| 9.18                | Exercises . . . . .   | 369        |
| <b>A</b>            | <b>Mathematical Software</b>                                  | <b>375</b> |
