<b>Notation</b>	<b>xi</b>
<b>Preface</b>	<b>xiii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 An Engineering Example: Vortex Control . . . . .	1
1.2 Important Aspects of PDE-Constrained Optimization Problems . . . . .	3
1.3 Nonsmooth Reformulation of Complementarity Conditions . . . . .	5
1.4 Nonsmooth Reformulation of Variational Inequalities . . . . .	6
1.4.1 Finite-Dimensional Variational Inequalities . . . . .	8
1.4.2 Infinite-Dimensional Variational Inequalities . . . . .	12
1.5 Properties of Semismooth Newton Methods . . . . .	13
1.6 Examples . . . . .	14
1.6.1 Optimal Control Problem with Control Constraints . . . . .	14
1.6.2 Variational Inequalities . . . . .	19
1.7 Organization . . . . .	20
<b>2 Elements of Finite-Dimensional Nonsmooth Analysis</b>	<b>25</b>
2.1 Generalized Differentials . . . . .	25
2.2 Semismoothness . . . . .	26
2.3 Semismooth Newton Method . . . . .	29
2.4 Higher-Order Semismoothness . . . . .	30
2.5 Examples of Semismooth Functions . . . . .	31
2.5.1 The Euclidean Norm . . . . .	31
2.5.2 The Fischer–Burmeister Function . . . . .	32
2.5.3 Piecewise Differentiable Functions . . . . .	32
2.6 Extensions . . . . .	35
<b>3 Newton Methods for Semismooth Operator Equations</b>	<b>37</b>
3.1 Introduction . . . . .	37
3.2 Abstract Semismooth Operators and the Newton Method . . . . .	42
3.2.1 Semismooth Operators in Banach Spaces . . . . .	42
3.2.2 Basic Properties . . . . .	42
3.2.3 Semismooth Newton Method in Banach Spaces . . . . .	45
3.2.4 Inexact Semismooth Newton Method in Banach Spaces . . . . .	49

	3.2.5	Projected Inexact Semismooth Newton Method in Banach Spaces . . . . .	52
	3.2.6	Alternative Regularity Conditions . . . . .	54
3.3		Semismooth Superposition Operators and a Semismooth Newton Method . . . . .	55
	3.3.1	Assumptions . . . . .	56
	3.3.2	A Generalized Differential for Superposition Operators . . . . .	58
	3.3.3	Semismoothness of Superposition Operators . . . . .	61
	3.3.4	Illustrations . . . . .	64
	3.3.5	Proof of the Main Theorems . . . . .	66
	3.3.6	Semismooth Newton Methods for Superposition Operators . . . . .	71
	3.3.7	Semismooth Composite Operators and Chain Rules . . . . .	75
	3.3.8	Further Properties of the Generalized Differential . . . . .	77
<b>4</b>		<b>Smoothing Steps and Regularity Conditions</b>	<b>81</b>
	4.1	Smoothing Steps . . . . .	81
	4.2	A Semismooth Newton Method without Smoothing Steps . . . . .	82
	4.3	Sufficient Conditions for Regularity . . . . .	86
<b>5</b>		<b>Variational Inequalities and Mixed Problems</b>	<b>93</b>
	5.1	Application to Variational Inequalities . . . . .	93
	5.1.1	Problems with Bound Constraints . . . . .	93
	5.1.2	Pointwise Convex Constraints . . . . .	97
	5.2	Mixed Problems . . . . .	102
	5.2.1	Karush–Kuhn–Tucker Systems . . . . .	102
	5.2.2	Connections to the Reduced Problem . . . . .	107
	5.2.3	Relations between Full and Reduced Newton System . . . . .	108
	5.2.4	Smoothing Steps . . . . .	111
	5.2.5	Regularity Conditions . . . . .	113
<b>6</b>		<b>Mesh Independence</b>	<b>115</b>
	6.1	Introduction . . . . .	115
	6.2	Uniform Semismoothness . . . . .	121
	6.3	Mesh-Independent Semismoothness . . . . .	133
	6.3.1	Mesh-Independent Semismoothness under Uniform Growth Conditions . . . . .	134
	6.3.2	Mesh-Independent Semismoothness without Uniform Growth Conditions . . . . .	137
	6.3.3	Mesh-Independent Semismoothness without Growth Conditions . . . . .	139
	6.4	Mesh Independence of the Semismooth Newton Method . . . . .	140
	6.4.1	Mesh-Independent Convergence under Uniform Growth Conditions . . . . .	142
	6.4.2	Mesh-Independent Convergence without Uniform Growth Conditions . . . . .	144
	6.4.3	Mesh-Independent Convergence without Growth Conditions . . . . .	147
	6.4.4	An Application . . . . .	147

---

<b>7</b>	<b>Trust-Region Globalization</b>	<b>151</b>
7.1	The Trust-Region Algorithm . . . . .	155
7.2	Global Convergence . . . . .	158
7.3	Implementable Decrease Conditions . . . . .	163
7.4	Transition to Fast Local Convergence . . . . .	166
<b>8</b>	<b>State-Constrained and Related Problems</b>	<b>171</b>
8.1	Problem Setting . . . . .	171
8.2	A Regularization Approach . . . . .	177
8.2.1	Convergence of the Path . . . . .	180
8.2.2	Hölder Continuity of the Path . . . . .	184
8.2.3	Rate of Convergence . . . . .	185
8.2.4	Interpretation as a Dual Regularization . . . . .	198
8.2.5	Related Approaches . . . . .	200
<b>9</b>	<b>Several Applications</b>	<b>201</b>
9.1	Distributed Control of a Semilinear Elliptic Equation . . . . .	201
9.1.1	Black-Box Approach . . . . .	204
9.1.2	All-at-Once Approach . . . . .	208
9.1.3	Finite Element Discretization . . . . .	209
9.1.4	Discrete Black-Box Approach . . . . .	212
9.1.5	Efficient Solution of the Newton System . . . . .	218
9.1.6	Discrete All-at-Once Approach . . . . .	221
9.1.7	Numerical Results . . . . .	222
9.2	Obstacle Problems . . . . .	232
9.2.1	Dual Problem . . . . .	233
9.2.2	Regularized Dual Problem . . . . .	235
9.2.3	Discretization . . . . .	238
9.2.4	Numerical Results . . . . .	240
9.3	$L^1$ -optimization . . . . .	243
<b>10</b>	<b>Optimal Control of Incompressible Navier–Stokes Flow</b>	<b>249</b>
10.1	Introduction . . . . .	249
10.2	Functional Analytic Setting of the Control Problem . . . . .	250
10.2.1	Function Spaces . . . . .	250
10.2.2	The Control Problem . . . . .	251
10.3	Analysis of the Control Problem . . . . .	253
10.3.1	State Equation . . . . .	253
10.3.2	Control-to-State Mapping . . . . .	257
10.3.3	Adjoint Equation . . . . .	258
10.3.4	Properties of the Reduced Objective Function . . . . .	261
10.4	Application of Semismooth Newton Methods . . . . .	263
10.5	Numerical Results . . . . .	264
10.5.1	The Pointwise Bound-Constrained Problem . . . . .	265
10.5.2	The Pointwise Ball-Constrained Problem . . . . .	267
<b>11</b>	<b>Optimal Control of Compressible Navier–Stokes Flow</b>	<b>273</b>
11.1	Introduction . . . . .	273

---

11.2	The Flow Control Problem . . . . .	273
11.3	Adjoint-Based Gradient Computation . . . . .	276
11.4	Semismooth BFGS-Newton Method . . . . .	277
11.4.1	Quasi-Newton BFGS-Approximations . . . . .	277
11.4.2	The Algorithm . . . . .	278
11.5	Numerical Results . . . . .	278
<b>Appendix</b>		<b>283</b>
A.1	Adjoint Approach for Optimal Control Problems . . . . .	283
A.1.1	Adjoint Representation of the Reduced Gradient . . . . .	283
A.1.2	Adjoint Representation of the Reduced Hessian . . . . .	285
A.2	Several Inequalities . . . . .	286
A.3	Elementary Properties of Multifunctions . . . . .	287
A.4	Nemytskii Operators . . . . .	287
<b>Bibliography</b>		<b>291</b>
<b>Index</b>		<b>305</b>
