

# Contents

<b>Preface to the second edition</b>	<b>xvii</b>
<b>Preface</b>	<b>xix</b>
<b>How to Use This Book</b>	<b>xxv</b>
<b>Notational Conventions</b>	<b>xxxii</b>
<b>1 Measurements and Modeling</b>	<b>1</b>
1.1 Mathematical Modeling . . . . .	3
1.1.1 Finitely Many Degrees of Freedom . . . . .	5
1.1.2 Infinitely Many Degrees of Freedom . . . . .	16
1.2 A Simple Model Problem for Image Reconstruction . . . . .	19
1.2.1 The Space of Lines in the Plane* . . . . .	20
1.2.2 Reconstructing an Object from Its Shadows . . . . .	23
1.2.3 Approximate Reconstructions . . . . .	27
1.2.4 Can an Object Be Reconstructed from Its Width? . . . . .	28
1.3 Conclusion . . . . .	30
<b>2 Linear Models and Linear Equations</b>	<b>31</b>
2.1 Linear Equations and Linear Maps . . . . .	32
2.1.1 Solving Linear Equations . . . . .	34
2.1.2 Stability of Solutions . . . . .	38
2.2 Infinite-dimensional Linear Algebra . . . . .	42
2.3 Complex Numbers and Vector Spaces* . . . . .	47
2.3.1 Complex Numbers . . . . .	47
2.3.2 Complex Vector Spaces . . . . .	50
2.4 Conclusion . . . . .	52
<b>3 A Basic Model for Tomography</b>	<b>53</b>
3.1 Tomography . . . . .	53
3.1.1 Beer's Law and X-ray Tomography . . . . .	56
3.2 Analysis of a Point Source Device . . . . .	62
3.3 Some Physical Considerations . . . . .	66

3.4	The Definition of the Radon Transform . . . . .	69
3.4.1	Appendix: Proof of Lemma 3.4.1* . . . . .	76
3.4.2	The Back-Projection Formula . . . . .	76
3.4.3	Continuity of the Radon Transform* . . . . .	77
3.5	The Radon Transform on Radial Functions . . . . .	80
3.5.1	The Range of the Radial Radon Transform* . . . . .	81
3.5.2	The Abel Transform* . . . . .	83
3.5.3	Volterra Equations of the First Kind* . . . . .	86
3.6	Conclusion . . . . .	89
<b>4</b>	<b>Introduction to the Fourier Transform</b>	<b>91</b>
4.1	The Complex Exponential Function . . . . .	91
4.2	Functions of a Single Variable . . . . .	93
4.2.1	Absolutely Integrable Functions . . . . .	94
4.2.2	The Fourier Transform for Integrable Functions* . . . . .	94
4.2.3	Appendix: The Fourier Transform of a Gaussian* . . . . .	98
4.2.4	Regularity and Decay* . . . . .	101
4.2.5	Fourier Transform on $L^2(\mathbb{R})$ . . . . .	111
4.2.6	A General Principle in Functional Analysis* . . . . .	116
4.3	Functions With Weak Derivatives . . . . .	117
4.3.1	Functions With $L^2$ -Derivatives* . . . . .	120
4.3.2	Fractional Derivatives and $L^2$ -Derivatives* . . . . .	121
4.4	Some Refined Properties of the Fourier Transform . . . . .	123
4.4.1	Localization Principle . . . . .	123
4.4.2	The Heisenberg Uncertainty Principle* . . . . .	125
4.4.3	The Paley-Wiener Theorem* . . . . .	129
4.4.4	The Fourier Transform of Generalized Functions* . . . . .	130
4.5	Functions of Several Variables . . . . .	136
4.5.1	$L^1$ -case . . . . .	136
4.5.2	Regularity and Decay . . . . .	140
4.5.3	$L^2$ -Theory . . . . .	144
4.5.4	The Fourier Transform on Radial Functions . . . . .	146
4.5.5	The Failure of Localization in Higher Dimensions . . . . .	148
4.6	Conclusion . . . . .	149
<b>5</b>	<b>Convolution</b>	<b>151</b>
5.1	Convolution . . . . .	154
5.1.1	Basic Properties of the Convolution Product . . . . .	155
5.1.2	Shift Invariant Filters* . . . . .	160
5.1.3	Convolution Equations . . . . .	161
5.2	Convolution and Regularity . . . . .	163
5.2.1	Approximation by Smooth Functions . . . . .	164
5.2.2	Some Convergence Results* . . . . .	166
5.2.3	Approximating Derivatives and Regularized Derivatives . . . . .	169

5.2.4	The Support of $f * g$ . . . . .	170
5.3	The $\delta$ -Function* . . . . .	172
5.3.1	Approximating the $\delta$ -Function in One-Dimension . . . . .	173
5.3.2	Resolution and the Full-Width Half-Maximum . . . . .	175
5.4	Conclusion . . . . .	177
<b>6</b>	<b>The Radon Transform</b> . . . . .	<b>179</b>
6.1	The Radon Transform . . . . .	179
6.2	Inversion of the Radon Transform . . . . .	184
6.2.1	The Central Slice Theorem* . . . . .	184
6.2.2	The Radon Inversion Formula* . . . . .	188
6.2.3	Filtered Back-Projection* . . . . .	190
6.2.4	Inverting the Radon Transform, Two Examples . . . . .	195
6.2.5	Back-Projection* . . . . .	197
6.3	The Hilbert Transform . . . . .	201
6.3.1	The Hilbert Transform as a Convolution . . . . .	202
6.3.2	Mapping Properties of the Hilbert Transform* . . . . .	206
6.4	Approximate Inverses for the Radon Transform . . . . .	207
6.4.1	Addendum* . . . . .	209
6.5	Functions with Bounded Support . . . . .	210
6.6	Continuity of the Radon Transform and Its Inverse* . . . . .	213
6.6.1	Data With Bounded Support . . . . .	213
6.6.2	Estimates for the Inverse Transform . . . . .	216
6.7	The Higher-Dimensional Radon Transform* . . . . .	219
6.8	The Hilbert Transform and Complex Analysis* . . . . .	223
6.9	Conclusion . . . . .	225
<b>7</b>	<b>Introduction to Fourier Series</b> . . . . .	<b>227</b>
7.1	Fourier Series in One Dimension* . . . . .	227
7.2	Decay of Fourier Coefficients . . . . .	233
7.2.1	Periodic Extension . . . . .	234
7.2.2	Fourier Coefficients of Differentiable Functions . . . . .	237
7.3	$L^2$ -Theory . . . . .	239
7.3.1	Geometry in $L^2([0, 1])$ . . . . .	239
7.3.2	The $L^2$ -Inversion formula . . . . .	244
7.3.3	Bessel's Inequality . . . . .	246
7.3.4	$L^2$ -Derivatives* . . . . .	248
7.4	General Periodic Functions . . . . .	251
7.4.1	Convolution and Partial Sums* . . . . .	252
7.4.2	Dirichlet Kernel . . . . .	254
7.5	The Gibbs Phenomenon . . . . .	256
7.5.1	An Example of the Gibbs Phenomenon . . . . .	257
7.5.2	The General Gibbs Phenomenon* . . . . .	260
7.5.3	Fejer Means . . . . .	262

7.5.4	Resolution . . . . .	265
7.6	The Localization Principle . . . . .	267
7.7	Higher-Dimensional Fourier Series . . . . .	269
7.7.1	$L^2$ -Theory . . . . .	272
7.8	Conclusion . . . . .	274
<b>8</b>	<b>Sampling</b> . . . . .	<b>277</b>
8.1	Sampling and Nyquist's Theorem* . . . . .	278
8.1.1	Bandlimited Functions and Nyquist's Theorem . . . . .	278
8.1.2	Shannon-Whittaker Interpolation . . . . .	281
8.2	The Poisson Summation Formula . . . . .	284
8.2.1	The Poisson Summation Formula . . . . .	285
8.2.2	Undersampling and Aliasing* . . . . .	288
8.2.3	Subsampling . . . . .	294
8.3	The Finite Fourier Transform* . . . . .	294
8.4	Quantization Errors . . . . .	298
8.5	Higher-Dimensional Sampling . . . . .	300
8.6	Conclusion . . . . .	303
<b>9</b>	<b>Filters</b> . . . . .	<b>305</b>
9.1	Basic Definitions . . . . .	306
9.1.1	Examples of Filters . . . . .	306
9.1.2	Linear filters . . . . .	309
9.1.3	Shift Invariant Filters and the Impulse Response . . . . .	310
9.1.4	Harmonic Components . . . . .	314
9.1.5	The Transfer Function . . . . .	319
9.1.6	Cascades of Filters . . . . .	323
9.1.7	Causal Filters . . . . .	325
9.1.8	Bandpass Filters . . . . .	326
9.1.9	The Inverse Filter . . . . .	328
9.1.10	Resolution . . . . .	332
9.1.11	The Resolution of a Cascade of Filters . . . . .	335
9.2	Filtering Periodic Inputs . . . . .	337
9.2.1	Resolution of Periodic Filters . . . . .	340
9.2.2	The Comb Filter and Poisson Summation* . . . . .	341
9.3	Higher-Dimensional Filters . . . . .	343
9.3.1	Isotropic Filters . . . . .	347
9.3.2	Resolution . . . . .	349
9.4	Some Applications of Filtering Theory . . . . .	350
9.4.1	Image Processing . . . . .	350
9.4.2	Linear Filter Analysis of Imaging Hardware . . . . .	365
9.5	Conclusion . . . . .	376

<b>10</b>	<b>Implementing Shift Invariant Filters</b>	<b>377</b>
10.1	Sampled Data . . . . .	378
10.2	Implementing Periodic Convolutions . . . . .	381
10.2.1	Further Properties of the Finite Fourier Transform . . . . .	381
10.2.2	The Approximation of Fourier Coefficients . . . . .	382
10.2.3	Approximating Periodic Convolutions . . . . .	384
10.3	Implementing Filters on Finitely Sampled Data . . . . .	386
10.3.1	Zero Padding Reconsidered . . . . .	390
10.4	Higher-Dimensional Filters . . . . .	392
10.4.1	Riemann Sum Approximations . . . . .	393
10.4.2	The Finite Fourier Transform in $n$ Dimensions . . . . .	394
10.4.3	The Fourier Representation for Shift Invariant Filters . . . . .	395
10.5	Appendix: The Fast Fourier Transform . . . . .	397
10.6	Conclusion . . . . .	399
<b>11</b>	<b>Reconstruction in X-Ray Tomography</b>	<b>401</b>
11.1	Basic Setup in X-Ray Tomography . . . . .	402
11.2	The Reconstruction Problem . . . . .	405
11.3	Scanner Geometries . . . . .	408
11.4	Algorithms for a Parallel Beam Machine . . . . .	413
11.4.1	Direct Fourier Inversion . . . . .	413
11.4.2	Filtered Back-Projection . . . . .	415
11.4.3	Linearly Interpolated Filters . . . . .	419
11.4.4	The Shepp-Logan Analysis of the Ram-Lak Filters . . . . .	421
11.4.5	Sample Spacing in a Parallel Beam Machine . . . . .	426
11.5	Filtered Back-Projection in the Fan Beam Case . . . . .	428
11.5.1	Fan Beam Geometry . . . . .	428
11.5.2	Fan Beam Filtered Back-Projection . . . . .	431
11.5.3	Implementing the Fan Beam Algorithm . . . . .	433
11.5.4	Data Collection for a Fan Beam Scanner . . . . .	435
11.5.5	Rebinning . . . . .	437
11.6	Some Mathematical Remarks* . . . . .	437
11.7	Spiral Scan CT . . . . .	439
11.7.1	Interpolation methods . . . . .	439
11.7.2	3d-Reconstruction Formulæ . . . . .	442
11.8	The Gridding Method* . . . . .	443
11.9	Conclusion . . . . .	447
<b>12</b>	<b>Imaging Artifacts in X-Ray Tomography</b>	<b>451</b>
12.1	The Effect of a Finite Width X-Ray Beam . . . . .	451
12.1.1	A Linear Model for Finite Beam Width . . . . .	452
12.1.2	A Nonlinear Model for Finite Beam Width . . . . .	454
12.1.3	The Partial Volume Effect . . . . .	456
12.2	The PSF . . . . .	458

12.2.1	Point Sources . . . . .	459
12.2.2	The PSF without Sampling . . . . .	459
12.3	The PSF with Sampling . . . . .	466
12.3.1	Ray Sampling . . . . .	466
12.3.2	View Sampling . . . . .	472
12.4	The Effects of Measurement Errors . . . . .	481
12.4.1	A Single Bad Ray . . . . .	483
12.4.2	A Bad Ray in Each View . . . . .	484
12.4.3	A Bad View . . . . .	486
12.5	Beam Hardening . . . . .	488
12.6	Conclusion . . . . .	490
<b>13</b>	<b>Algebraic Reconstruction Techniques</b>	<b>493</b>
13.1	Algebraic Reconstruction . . . . .	493
13.2	Kaczmarz's Method . . . . .	498
13.3	A Bayesian Estimate . . . . .	503
13.4	Variants of the Kaczmarz Method . . . . .	505
13.4.1	Relaxation Parameters . . . . .	505
13.4.2	Other Related Algorithms . . . . .	506
13.5	Conclusion . . . . .	507
<b>14</b>	<b>Magnetic Resonance Imaging</b>	<b>509</b>
14.1	Introduction . . . . .	509
14.2	Nuclear Magnetic Resonance . . . . .	510
14.3	The Bloch Phenomological Equation . . . . .	511
14.4	The Rotating Reference Frame . . . . .	513
14.5	A Basic Imaging Experiment . . . . .	514
14.6	Selective Excitation . . . . .	517
14.7	Spin-warp Imaging . . . . .	519
14.8	Contrast and Resolution . . . . .	521
14.9	Conclusion . . . . .	523
<b>15</b>	<b>Probability and Random Variables</b>	<b>525</b>
15.1	Measure Theory* . . . . .	526
15.1.1	Allowable Events . . . . .	526
15.1.2	Measures and Probability . . . . .	529
15.1.3	Integration . . . . .	533
15.1.4	Independent Events . . . . .	540
15.1.5	Conditional Probability . . . . .	541
15.2	Random Variables* . . . . .	543
15.2.1	Cumulative Distribution Function . . . . .	546
15.2.2	The Variance . . . . .	549
15.2.3	The Characteristic Function . . . . .	550
15.2.4	A Pair of Random Variables . . . . .	552

15.2.5	Several Random Variables . . . . .	558
15.3	Some Important Random Variables . . . . .	560
15.3.1	Bernoulli Random Variables . . . . .	560
15.3.2	Poisson Random Variables . . . . .	561
15.3.3	Gaussian Random Variables . . . . .	562
15.4	Limits of Random Variables . . . . .	565
15.4.1	The Central Limit Theorem . . . . .	565
15.4.2	Other Examples of Limiting Distributions . . . . .	568
15.5	Statistics and Measurements . . . . .	571
15.6	Conclusion . . . . .	574
<b>16</b>	<b>Applications of Probability</b>	<b>577</b>
16.1	Applications to X-Ray Imaging . . . . .	577
16.1.1	Modeling a Source-Detector Pair . . . . .	577
16.1.2	Beer's Law . . . . .	578
16.2	Noise in the Filtered Back-Projection Algorithm . . . . .	581
16.2.1	Sampled Data . . . . .	582
16.2.2	A Computation of the Variance in the Measurements . . . . .	585
16.2.3	The Variance of the Radon Transform . . . . .	586
16.2.4	The Variance in the Reconstructed Image . . . . .	588
16.2.5	Signal-to-Noise Ratio, Dosage and Contrast . . . . .	589
16.3	Signal-to-Noise in Magnetic Resonance Imaging . . . . .	591
16.4	Image Reconstruction in PET . . . . .	593
16.4.1	Positron Emission Physics . . . . .	594
16.4.2	A Probabilistic Model for PET . . . . .	597
16.4.3	The Maximum Likelihood Algorithm . . . . .	599
16.4.4	Determining the Transition Matrix . . . . .	601
16.5	Conclusion . . . . .	603
<b>17</b>	<b>Random Processes</b>	<b>605</b>
17.1	Random Processes in Measurements . . . . .	605
17.2	Basic Definitions . . . . .	607
17.2.1	Statistical Properties of Random Processes . . . . .	609
17.2.2	Stationary Random Processes . . . . .	610
17.2.3	Spectral Analysis of Stationary Processes* . . . . .	611
17.2.4	Independent and Stationary Increments . . . . .	615
17.3	Examples of Random Processes . . . . .	615
17.3.1	Gaussian Random Process . . . . .	615
17.3.2	The Poisson Counting Process . . . . .	616
17.3.3	Poisson Arrival Process . . . . .	619
17.3.4	Fourier Coefficients for Periodic Processes* . . . . .	622
17.3.5	White Noise* . . . . .	625
17.4	Random Inputs to Linear Systems . . . . .	627
17.4.1	The Autocorrelation of the Output . . . . .	629

17.4.2	Thermal or Johnson Noise . . . . .	631
17.4.3	Optimal Filters . . . . .	633
17.5	Noise in Filtered Back-Projection . . . . .	635
17.6	Conclusion . . . . .	638
<b>A</b>	<b>Background Material</b>	<b>639</b>
A.1	Numbers . . . . .	639
A.1.1	Integers . . . . .	639
A.1.2	Rational Numbers . . . . .	641
A.1.3	Real Numbers . . . . .	645
A.1.4	Cauchy Sequences . . . . .	648
A.2	Vector Spaces . . . . .	649
A.2.1	Euclidean $n$ -Space . . . . .	650
A.2.2	General Vector Spaces . . . . .	653
A.2.3	Linear Transformations and Matrices . . . . .	656
A.2.4	Norms and Metrics . . . . .	661
A.2.5	Inner Product Structure . . . . .	665
A.2.6	Linear Transformations and Linear Equations . . . . .	671
A.3	Functions, Theory, and Practice . . . . .	673
A.3.1	Power Series . . . . .	675
A.3.2	The Binomial Formula . . . . .	679
A.3.3	Some Higher Transcendental Functions . . . . .	681
A.4	Spaces of Functions* . . . . .	686
A.4.1	Examples of Function Spaces . . . . .	686
A.4.2	Completeness . . . . .	690
A.4.3	Linear Functionals . . . . .	692
A.4.4	Measurement, Linear Functionals, and Weak Convergence . . . . .	694
A.4.5	Generalized Functions on $\mathbb{R}$ . . . . .	696
A.4.6	Generalized Functions on $\mathbb{R}^n$ . . . . .	702
A.5	Functions in the Real World . . . . .	705
A.5.1	Approximation . . . . .	705
A.5.2	Sampling and Interpolation . . . . .	711
A.6	Numerical Differentiation and Integration . . . . .	714
A.6.1	Numerical Integration . . . . .	716
A.6.2	Numerical Differentiation . . . . .	719
<b>B</b>	<b>Basic Analysis</b>	<b>723</b>
B.1	Sequences . . . . .	723
B.2	Series . . . . .	725
B.3	Limits of Functions and Continuity . . . . .	729
B.4	Differentiability . . . . .	730
B.5	Higher-Order Derivatives and Taylor's Theorem . . . . .	732
B.6	Integration . . . . .	732
B.7	Improper Integrals . . . . .	735

Contents	xv
B.8 Fubini's Theorem and Differentiation of Integrals* . . . . .	739
