Preface	ix
1 Introduction	1
2 Mathematical Preliminaries	5
2.1 Introduction to Conservation Laws	5
2.2 Numerical Discretization of Conservation Laws	21
3 Basic Queueing Models	25
3.1 Motivation	26
3.2 Discrete Event Simulation	26
3.3 Capacity-Restricted Conservation Law	30
3.4 Summary	35
4 Models Based on Ordinary Differential Equations	37
4.1 Motivation	37
4.2 A Model for Supply Networks	38
4.2.1 Supply Chain	40
4.3 The Structure of the Network	40
4.4 Evolutions and Steady States	42
4.4.1 Steady States	42
4.4.2 Stability and Bullwhip Effect	43
4.4.3 Consensus	43
4.5 Summary	44
5 Models Based on Partial Differential Equations	45
5.1 Motivation	45
5.2 General Network Topologies	46
5.3 Comparison to Existing Models	51
5.4 Existence of Weak Solutions	53
5.4.1 Part I—Consecutive Processors	54
5.4.2 Part II—Junctions of Arbitrary Degree and Networks	66
5.5 Supply Chain Network Model	68
5.5.1 Kinetic Model for a Single Processor	69
5.5.2 Kinetic Model on a Network	73
5.6 Summary	83

6	Continuum-Discrete Models	85
6.1	Motivation	86
6.2	Basic Definitions	88
6.3	Dynamics on Arcs	90
6.4	Riemann Solvers at Nodes	93
6.5	A Riemann Solver According to Rule SC1	97
6.6	Estimates on Density Variation for the Riemann Solver SC1	99
6.7	A Riemann Solver According to Rule SC2	108
6.8	A Riemann Solver According to Rule SC3	111
6.9	Analysis of Equilibria	113
6.10	A Continuum-Discrete Model for Supply Networks	121
6.11	Summary	130
7	Control and Optimization Problem for Networks	133
7.1	Motivation	134
7.2	Basics	135
7.3	A General Adjoint Calculus for Transport Processes on Networks . . .	136
7.3.1	Necessary First-Order Conditions (Continuous Case) . . .	138
7.3.2	Numerical Solution of First-Order Optimality System (Con- tinuous Case)	140
7.3.3	Necessary First-Order Optimality Conditions (Discrete Case)	143
7.4	Mixed-Integer Programming Model	146
7.4.1	Derivation of the MIP	147
7.5	Reformulation of the MIP as the LP	151
7.5.1	An Equivalent Linear Programming Problem	154
7.5.2	Outline of the Proof	156
7.6	Summary	161
8	Computational Results	163
8.1	Simulation	163
8.1.1	Comparison to Discrete Event Simulation	163
8.1.2	Computing Times	165
8.1.3	Priority-Dependent Network Simulation	168
8.1.4	Continuum-Discrete Model Simulations and Comparisons	170
8.2	Optimization	185
8.2.1	Qualitative Comparison of Approaches	188
8.2.2	Convergence Results for the MIP	190
8.2.3	Computational Times	193
8.3	Application	195
	Bibliography	199
	Index	205
