Contents

Preface **xi**

1 Some Examples **1**
1.1 Mechanical impact . . . 2
1.1.1 Ball and table . . . 2
1.1.2 More complex rigid-body systems with impact . . . 3
1.1.3 Elastic bodies in impact . . . 5
1.2 Coulomb friction . . . 6
1.3 Diodes and transistors . . . 9
1.3.1 Diode circuits . . . 9
1.3.2 Bipolar junction transistors . . . 11
1.3.3 Transmission lines with diodes . . . 12
1.4 Queues and resource limits . . . 13
1.4.1 Queues . . . 13
1.4.2 Traffic flow . . . 14
1.4.3 Biological resource limits . . . 15

2 Static Problems **17**
2.1 Basic tools . . . 17
2.1.1 Convex analysis . . . 18
2.1.2 Set-valued functions . . . 20
2.1.3 Upper semicontinuity and closed graphs . . . 22
2.1.4 Measurability considerations . . . 29
2.2 Complementarity problems . . . 30
2.2.1 Lemke's algorithm . . . 31
2.2.2 Lemke's method and homotopy methods . . . 37
2.2.3 Polyhedral cones . . . 38
2.2.4 Special structure . . . 39
2.2.5 Complementarity in infinite dimensions . . . 42
2.3 Variational inequalities . . . 42
2.3.1 VIs of the second kind . . . 43
2.3.2 Equivalent formulations . . . 44
2.3.3 Complementarity bounds . . . 46
2.3.4 Existence and uniqueness in finite dimensions . . . 49
2.3.5 Existence of solutions for infinite-dimensional problems . . . 52

2.3.6 Convex functions and subdifferentials . . . 54
2.4 Maximal monotone operators . . . 54
2.4.1 Main properties . . . 55
2.4.2 More examples of maximal monotone operators . . . 61
2.4.3 Sums of maximal monotone operators . . . 64
2.4.4 VIs and Lagrange multipliers . . . 67
2.5 Pseudomonotone operators . . . 69
2.6 Signorini's problem . . . 71

3 Formalisms 77
3.1 Differential variational inequalities . . . 77
3.1.1 A discussion of meanings . . . 79
3.2 Notion of index . . . 81
3.2.1 Solution behavior . . . 82
3.2.2 Index-zero problems . . . 82
3.2.3 Index-one problems . . . 83
3.2.4 Index-two problems . . . 84
3.2.5 Index three and higher . . . 86
3.3 Infinite-dimensional problems . . . 87
3.3.1 Gelfand triples . . . 88
3.3.2 Interpolation spaces in Gelfand triples . . . 91
3.4 Differentiation lemmas . . . 92
3.4.1 Differentiation lemmas for CPs . . . 93
3.4.2 Differentiation lemmas for VIs . . . 98

4 Variations on the Theme 101
4.1 Differential inclusions . . . 101
4.1.1 Set-valued integrals . . . 102
4.1.2 Integral and differential definitions of solutions to differential inclusions . . . 105
4.1.3 Existence of solutions to differential inclusions . . . 105
4.1.4 Comparison with DVIs . . . 109
4.2 Maximal monotone operators and differential inclusions . . . 111
4.2.1 Theory of maximal monotone differential inclusions . . . 111
4.2.2 Maximal monotone operators and Gelfand triples . . . 117
4.2.3 Application to the heat equation and obstacle problems . . . 118
4.2.4 Uniqueness of solutions and maximal monotone operators . . . 121
4.3 Projected dynamical systems . . . 122
4.4 Sweeping processes . . . 124
4.4.1 Pure sweeping processes . . . 124
4.4.2 Measure differential inclusions . . . 125
4.4.3 Moreau's product rule . . . 128
4.4.4 MDIs and discontinuous sweeping processes . . . 130
4.5 Linear complementarity systems . . . 137
4.6 Convolution complementarity problems . . . 141
4.6.1 Index-zero CCPs . . . 142
4.6.2 Index-one CCPs . . . 143

4.6.3 Index-two and higher-index CCPs . . . 143
4.6.4 Fractional index problems . . . 144
4.7 Parabolic variational inequalities . . . 144
4.7.1 Comparison with maximal monotone differential inclusions . . . 145
4.7.2 Comparison with DVIs . . . 145

5 Index Zero and Index One **147**
5.1 Index-zero problems . . . 147
5.1.1 Existence and uniqueness . . . 147
5.1.2 Index-zero CPs . . . 149
5.1.3 Normal compliance for mechanical contact . . . 150
5.2 Index-one problems . . . 151
5.2.1 Pure index-one DVIs . . . 152
5.2.2 Uniqueness of solutions of index-one DVIs . . . 161
5.3 Convolution complementarity problems . . . 167
5.3.1 Existence of solutions to CCPs . . . 168
5.3.2 Uniqueness for CCPs . . . 173
5.4 Application: Circuits with diodes . . . 178
5.4.1 Obtaining differential equations from circuits . . . 179
5.4.2 Incorporating diodes . . . 182
5.4.3 Bounds on $\widehat{Z}(s)$ and index one . . . 184
5.4.4 Swapping currents and voltages . . . 186
5.4.5 Comparisons with other approaches . . . 189
5.4.6 What if H is not a connected subgraph of G? . . . 190
5.4.7 Active elements and nonlinear circuits . . . 192
5.5 Application: Economic networks . . . 195
5.5.1 Traffic networks . . . 197
5.5.2 Dynamic traffic models . . . 199
5.5.3 Existence . . . 201
5.5.4 Uniqueness . . . 203

6 Index Two: Impact Problems **207**
6.1 Rigid-body dynamics . . . 207
6.1.1 Lagrangian formulation of mechanics . . . 208
6.1.2 Frictionless problems . . . 210
6.1.3 Coulomb friction . . . 211
6.1.4 Modeling of partially elastic restitution . . . 213
6.1.5 Technical issues . . . 217
6.1.6 Painlevé's paradox . . . 217
6.1.7 Resolution of Painlevé's paradox . . . 219
6.1.8 Approaches to the general problem of existence . . . 221
6.1.9 Proving existence with Coulomb friction . . . 222
6.1.10 Limits of rigid-body models . . . 231
6.2 Elastic bodies in impact . . . 232
6.2.1 Formulating the contact conditions . . . 235
6.2.2 Formulating contact between two bodies . . . 236
6.2.3 Technical issues . . . 238

6.2.4 Routh's rod . . . 239
6.2.5 Vibrating string . . . 241
6.2.6 Abstract treatment of a class of elastic bodies . . . 249
6.2.7 Proving existence . . . 251
6.2.8 General elastic bodies . . . 255
6.2.9 Wave equation: Existence via compensated compactness . . . 257
6.2.10 Wave equation: In a half-space . . . 258
6.3 Viscoelastic bodies . . . 261
6.3.1 Frictionless impact for Kelvin–Voigt viscoelastic bodies . . . 263
6.3.2 Coulomb friction . . . 271

7 Fractional Index Problems 273
7.1 Fractional differentiation and integration . . . 274
7.2 Existence and uniqueness . . . 275
7.3 Further regularity results . . . 280
7.4 Index between one and two . . . 281

8 Numerical Methods 283
8.1 Choices . . . 283
8.1.1 Methods for smooth differential equations . . . 284
8.2 Penalty and index reduction methods . . . 285
8.3 Piecewise smooth methods . . . 286
8.3.1 Index-zero problems . . . 287
8.3.2 Index-one problems . . . 288
8.3.3 Switching for index-zero problems . . . 289
8.3.4 Switching for index-one problems . . . 291
8.3.5 Algorithm development . . . 293
8.4 Time stepping . . . 293
8.4.1 Runge–Kutta methods . . . 294
8.4.2 Existence of solutions to the Runge–Kutta system . . . 299
8.4.3 Order of convergence for smooth solutions . . . 303
8.4.4 Runge–Kutta methods in practice . . . 305

A Some Basics of Functional Analysis 307
A.1 Metric spaces . . . 307
A.2 Vector and Banach spaces . . . 310
A.3 Dual spaces, Hilbert spaces, and weak convergence . . . 312
A.3.1 Adjoints of linear operators . . . 313
A.3.2 Weak versus strong topologies . . . 314
A.3.3 Compactness in particular spaces . . . 315
A.4 Distributions and measures . . . 316
A.5 Sobolev spaces and partial differential equations . . . 321
A.6 Principles of nonlinear analysis . . . 324

B Convex and Nonsmooth Analysis 327
B.1 Convex sets and functions . . . 327
B.1.1 Support functions . . . 328
B.1.2 Convex projections in Hilbert spaces . . . 329

B.1.3 Convex cones . . . 330
B.1.4 Tangent cones and normal cones . . . 335
B.1.5 Existence of minimizers . . . 339
B.2 Subdifferentials and generalized gradients . . . 340
B.2.1 Fenchel duality . . . 342
B.2.2 Constrained convex optimization and KKT conditions . . . 344
B.2.3 Inf-convolutions . . . 348
B.2.4 Nonsmooth analysis: Beyond convex analysis . . . 350

C Differential Equations **353**
C.1 Existence theory for Lipschitz ordinary differential equations . . . 353
C.2 Gronwall-type lemmas . . . 354
C.3 Carathéodory's existence theorem for continuous ordinary differential equations . . . 356
C.4 Laplace and Fourier transforms . . . 358

Bibliography **361**

Index **381**
