<b>List of Algorithms</b>	<b>xi</b>
<b>Preface</b>	<b>xiii</b>
<b>1 Krylov Subspace Methods</b>	<b>1</b>
1.1 Simple iterative methods . . . . .	1
1.1.1 Preliminaries . . . . .	2
1.1.2 Simple linear iterative methods . . . . .	4
1.1.3 A few convergence results . . . . .	5
1.1.4 Positive definiteness, $A$ -norm, and $A$ -orthogonality . . . . .	6
1.1.5 A convergence result for Hermitian matrices . . . . .	7
1.1.6 Relaxation methods . . . . .	8
1.1.7 Relaxation parameters and Chebyshev polynomials . . . . .	9
1.1.8 Simple bounds for non-Hermitian matrices . . . . .	12
1.1.9 Quadratic functionals and linear systems . . . . .	13
1.1.10 Steepest descent and residual minimization . . . . .	13
1.1.11 Fixed point methods . . . . .	15
1.1.12 Convergence and divergence of fixed point methods . . . . .	16
1.1.13 Newton's method . . . . .	16
1.1.14 The Anderson acceleration . . . . .	18
1.2 Subspaces and iterative methods . . . . .	20
1.2.1 Minimization and projection . . . . .	21
1.2.2 Krylov subspaces . . . . .	21
1.2.3 Optimal subspaces . . . . .	22
1.2.4 The optimality of the Krylov subspaces . . . . .	23
1.2.5 The minimal residual method, GMRES . . . . .	24
1.2.6 The conjugate gradient method . . . . .	27
1.2.7 Krylov subspaces and matrix decompositions . . . . .	29
1.2.8 Formal scalar product . . . . .	30
1.2.9 The biconjugate gradient method . . . . .	30
1.2.10 The quasi-minimal residual method . . . . .	32
1.2.11 A minimal residual method for nonlinear problems . . . . .	33
1.2.12 Finite precision computations . . . . .	34
1.3 Analysis of the minimal residual method . . . . .	36
1.3.1 Convergence . . . . .	36
1.3.2 Positive definite matrices . . . . .	36

1.3.3	Convergence of the restarted method . . . . .	37
1.3.4	Polynomials and estimates . . . . .	39
1.3.5	Polynomials and resolvent . . . . .	39
1.3.6	Asymptotic convergence factor . . . . .	40
1.3.7	Numerical range . . . . .	41
1.3.8	An estimate for resolvent . . . . .	41
1.3.9	Pseudospectra . . . . .	42
1.3.10	An estimate for normal matrices . . . . .	43
1.3.11	Minimal residuals and the Laplace equation . . . . .	44
1.3.12	The method of logarithmic potential . . . . .	44
1.3.13	Further analysis of the method of logarithmic potential . . . . .	45
1.4	Analysis of the conjugate gradient method . . . . .	48
1.4.1	Convergence of the conjugate gradient method . . . . .	48
1.4.2	The classic and some sharper estimates . . . . .	49
1.4.3	The Arnoldi and Lanczos methods . . . . .	50
1.4.4	Ritz vectors and Ritz values . . . . .	51
1.4.5	Recurrences and polynomials . . . . .	52
1.4.6	“Superlinear convergence” and “disappearing” eigenvalues . . . . .	53
1.4.7	Inexact iterations . . . . .	55
1.4.8	An inexact Richardson method . . . . .	55
1.4.9	An inexact conjugate gradient method . . . . .	57
1.4.10	Preconditioning . . . . .	58
1.4.11	Preconditioning, the Hermitian case . . . . .	59
1.4.12	Number of iterations and alternative convergence estimates . . . . .	60
1.4.13	A linear iteration as a preconditioner . . . . .	62
<b>2</b>	<b>Toeplitz Matrices and Preconditioners</b>	<b>67</b>
2.1	Introduction to Toeplitz Matrices . . . . .	67
2.1.1	Toeplitz matrices and polynomials . . . . .	67
2.1.2	Circulant matrices and Fourier matrices . . . . .	69
2.1.3	The fast Fourier transform . . . . .	71
2.2	Preconditioners and applications . . . . .	73
2.2.1	Circulant preconditioners . . . . .	73
2.2.2	Analysis of optimal preconditioners . . . . .	75
2.2.3	Analysis of simple preconditioners . . . . .	79
2.2.4	Which circulant preconditioner is better? . . . . .	80
2.2.5	Proof of estimates for the outlier function . . . . .	84
2.2.6	Are there better circulants? . . . . .	87
2.2.7	Multilevel Toeplitz matrices and multilevel circulants . . . . .	92
2.2.8	Applications and remarks . . . . .	94
<b>3</b>	<b>Multigrid Preconditioners</b>	<b>99</b>
3.1	The introductory section . . . . .	99
3.1.1	Preliminaries . . . . .	100
3.1.2	A two-point boundary value problem . . . . .	100
3.1.3	Finite element method: A two-point boundary value problem . . . . .	101
3.1.4	Finite element method: Systems of algebraic equations . . . . .	101
3.1.5	The Poisson equation . . . . .	103

	3.1.6	Approximation properties of finite elements . . . . .	105
	3.1.7	Stiffness matrices . . . . .	106
3.2		Two-grid iteration . . . . .	108
	3.2.1	The smoothing property of basic iterative methods . . . . .	108
	3.2.2	Coarse grid correction . . . . .	109
	3.2.3	Prolongation and restriction . . . . .	110
	3.2.4	Coarse grid operator . . . . .	111
	3.2.5	Iteration matrix . . . . .	112
	3.2.6	Convergence analysis for the model problem . . . . .	112
	3.2.7	Two-grid preconditioner . . . . .	114
3.3		Multigrid iteration . . . . .	115
	3.3.1	V-, W- and F-cycles . . . . .	117
	3.3.2	Complexity of a multigrid preconditioner . . . . .	118
	3.3.3	Iteration matrix . . . . .	119
	3.3.4	Convergence of the multigrid iteration . . . . .	121
	3.3.5	Convergence of the W-cycle . . . . .	122
	3.3.6	Smoothing and approximation properties . . . . .	123
	3.3.7	The case of a self-adjoint problem . . . . .	124
3.4		Convergence analysis . . . . .	127
	3.4.1	The Poisson problem: Approximation property . . . . .	129
	3.4.2	The Poisson problem: Smoothing property . . . . .	131
	3.4.3	Less standard cases . . . . .	134
	3.4.4	The case of less than full regularity . . . . .	135
	3.4.5	Variational framework . . . . .	137
	3.4.6	Nonconforming finite elements and $\mathbb{U}_{k-1} \not\subseteq \mathbb{U}_k$ . . . . .	138
	3.4.7	Multigrid for nonconforming elements . . . . .	140
<b>4</b>		<b>Preconditioners by Space Decomposition</b>	<b>145</b>
4.1		Space decomposition framework . . . . .	145
	4.1.1	Space decomposition and preconditioning . . . . .	145
	4.1.2	Sequential version . . . . .	147
	4.1.3	The strengthened Cauchy–Schwarz inequality . . . . .	148
	4.1.4	Eigenvalue analysis of space decomposition preconditioners . . . . .	149
4.2		Grid decomposition methods . . . . .	152
	4.2.1	Additive multigrid method . . . . .	152
	4.2.2	BPX preconditioner . . . . .	153
	4.2.3	Local grid refinement . . . . .	155
	4.2.4	Hierarchical basis preconditioner . . . . .	156
4.3		Domain decomposition methods . . . . .	158
	4.3.1	Alternating Schwarz method . . . . .	158
	4.3.2	Fitting alternating Schwarz to space decomposition framework . . . . .	159
	4.3.3	Multiplicative and additive Schwarz preconditioners . . . . .	160
	4.3.4	Nonoverlapping domain decomposition preconditioners . . . . .	161
	4.3.5	A matrix form of the Poincare–Steklov operator . . . . .	163
	4.3.6	A Neumann–Neumann preconditioner . . . . .	164
4.4		Convergence analysis for the Poisson problem . . . . .	165
	4.4.1	BPX preconditioner . . . . .	166
	4.4.2	Hierarchical basis preconditioner . . . . .	169

4.4.3	Multiplicative and additive Schwarz preconditioners . . . . .	171
4.4.4	Nonoverlapping domain preconditioners . . . . .	172
<b>5</b>	<b>Some Applications</b>	<b>175</b>
5.1	Multigrid preconditioners for singular-perturbed problems . . . . .	175
5.1.1	Singular-perturbed partial differential equations . . . . .	175
5.1.2	What is a robust method? . . . . .	177
5.1.3	Conditions on smoothing iterations . . . . .	177
5.1.4	Bibliographical remarks . . . . .	178
5.1.5	The linear reaction-diffusion problem . . . . .	179
5.1.6	ILU decomposition, ILU smoother . . . . .	182
5.1.7	Anisotropic diffusion equation . . . . .	185
5.1.8	Upwind schemes for the convection-diffusion equations . .	190
5.1.9	A smoother for the convection-diffusion equations . . . . .	192
5.1.10	The streamline-diffusion finite element method . . . . .	193
5.1.11	Analysis of a multigrid preconditioner for convection-diffusion equations . . . . .	198
5.1.12	Linear elasticity . . . . .	201
5.2	Preconditioners for certain problems of fluid mechanics . . . . .	205
5.2.1	The Stokes problem . . . . .	206
5.2.2	The algebraic Stokes system . . . . .	209
5.2.3	Some useful operator norms . . . . .	211
5.2.4	The Vanka smoother for the Stokes system . . . . .	212
5.2.5	Distributive iterations as smoothers . . . . .	214
5.2.6	Smoother of Braess and Sarazin . . . . .	215
5.2.7	Inexact Uzawa smoother . . . . .	217
5.2.8	Approximation property . . . . .	218
5.2.9	Inner-outer iterations . . . . .	220
5.2.10	Block-diagonal preconditioner . . . . .	220
5.2.11	Augmented-Lagrangian preconditioners I . . . . .	222
5.2.12	Augmented-Lagrangian preconditioners II . . . . .	224
	<b>Bibliography</b>	<b>231</b>
	<b>Index</b>	<b>245</b>
