Index

Additive Schwarz Method
  continuous level, 5
approximate factorization, 142
ASM, 13

B. Després' algorithm, 45
block Jacobi method, 6
boundary condition
  absorbing, 57, 66
  Dirichlet, 17, 18, 38, 75, 122, 147
  first-order absorbing, 75
  Neumann, 21
  Optimal Interface Conditions, 54
  optimized Robin, 65
  Robin, 17, 35, 38, 46

coarse space
  DtN map, 114
  Nicolaides, 107
  scalability, 103
  two-level additive Schwarz preconditioner, 107
Conjugate gradient
  algorithm, 84
  convergence, 85
  preconditioned, 87
  preconditioned algorithm, 88
Convergence
  Additive Schwarz Method, 127
  Després' algorithm, 45
  Helmholtz, 44
  one D, 14
  optimized Robin, 65
  optimized second order condition, 67
  P.L. Lions' algorithm, 36
  two dimensional, 14

direct solver
  FreeFem++, 21
  Gaussian elimination, 131
  multifrontal, 131
  MUMPS, 207
  PETSc, 203
  UMFPACK, 21
Dirichlet to Neumann map, 56
  variational formulation, 115

eigenvalue problem
  symmetric generalized, 166
Elasticity
  nearly incompressible, 188
  steel, rubber, 189

FETI, 131, 135
  continuous level, 138
fictitious space lemma, 164
fixed point method, 78
FreeFem++
  3D, 25
  elasticity, 32
  introduction, 18

GENCI, 190
GenEO coarse space, 177
GMRES, 88
  algorithm, 91
  convergence, 92
  normal matrix, 93
graph partitioner
  FreeFem++, 23
  METIS, 11, 23, 117, 153
  SCOTCH, 11, 23, 117

Helmholtz equation, 42
hybrid preconditioner
  efficient implementation, 181
  PCG algorithm, 183
hybrid solver
  AMGe, 129
  GAMG, 207, 213
  PETSc, 203

interface FETI, 138

Krylov method
  BiCGSTAB, 88, 93
  conjugate gradient, 82
  Conjugate gradient algorithm, 84
  fixed point iterations, 77
  GMRES, 88, 90
  GMRES algorithm, 91
  gradient methods, 81
  hybrid Schwarz, 183
  ill posed, 94
  ill-posed problem, 94
  implementation, 97
  minimal polynomial, 95
  MINRES, 89
  ORTHODIR, 71
  preconditioned BiCGSTAB algorithm, 94
  Preconditioned conjugate gradient, 87
  singular matrix, 97
  singular symmetric matrix, 96
  space, 80
  vs. fixed point method, 93

multiplicity of intersections, 117, 175

Neumann matrix, 173
Neumann–Neumann, 131, 134, 136, 145
  balancing, 190
  GenEO, 197
Nicolaides coarse space
  FreeFem++, 108
number of colors, 117

OAS, 187
Optimal gradient method, 82
Optimized Schwarz method

Helmholtz, 62
Helmholtz problem, 41
implementation, 48, 51, 72
OAS, 187
Optimized interface conditions, 59
ORAS, 52, 53
P.L. Lions' algorithm, 35
Robin conditions, 64
SORAS, 186, 187
ORAS
algebraic level, 53
continuous level, 52
OSM, *see* Optimized Schwarz method
Optimized second-order conditions, 65
overlap, 117
convergence, 14
FreeFem++, 22
minimal, 7

P.L. Lions' algorithm, 17, 35
partition of unity, 162
algebraic, 8
continuous level, 2, 117
FreeFem++, 23
skeleton, 145
two-level, 107

RAS, 13
Restricted Additive Schwarz
continuous level, 4

scalability
strong, 103, 214
weak, 103, 216
Schur complement
local, 145
Schwarz method
additive Schwarz method, 13
algebraic partition of unity, 8
Block Jacobi algorithm, 6
continuous Additive Schwarz method, 5
continuous algorithm, 1
continuous Jacobi algorithm, 1
continuous restricted additive Schwarz, 4
convergence, 178
equivalence to RAS, 3
FreeFem++, 18
hybrid two-level algorithm, 179
P.L Lions algorithm, 17
partition of unity, 2
RAS, 13
restricted additive Schwarz, 13
two-level additive, 107
two-level hybrid convergence, 181
variant, 17, 35, 45
separator, 132
skeleton, 144

Smith
normal form, 155
SORAS, 186, 187
convergence, 188
stable decomposition, 120
Stokes, 190
substructuring method, 144
balancing Neumann–Neumann, 194
continuous FETI algorithm, 135
continuous level, 137
continuous Neumann–Neumann algorithm, 134
convergence, 193, 197
GenEO, 198, 200
ill posed subproblems, 193
Neumann–Neumann preconditioner, 146

two-level method
additive Schwarz, 107
convergence, 120, 121, 125
fictitious space lemma, 164
Galerkin correction, 106, 218
GenEO, 161, 198, 200
Nicolaides coarse space, 107, 122
SORAS, 188
spectral coarse space, 113, 122
