- **Scorer functions of complex arguments**, 359
- **software survey**, 355
- **stability of a numerical method**, 357
- **Steed’s algorithm** for computing continued fractions, 181
- **steepest descent path**, 158
- **Stieltjes continued fraction**, 178
- **procedure for recurrence relations**, 139
- **Stirling numbers**
  - **definitions**, 337
  - **explicit representations**, 337
  - **generating functions**, 337
  - **of the first kind**
    - **uniform asymptotic expansion**, 343
  - **of the second kind**, 44
    - **uniform asymptotic expansion**, 338
- **Stokes phenomenon**, 40
- **subdominant solution** of inhomogeneous second order difference equation, 115
- **superminimal solution** of inhomogeneous second order difference equations, 115
- **symmetric elliptic integrals**, 345
- **Taylor series**
  - **Cauchy’s formula for remainder**, 16
  - **Lagrange’s formula for remainder**, 16
  - **Taylor’s formula for remainder**, 16
  - **Taylor-series method** for boundary value problem in the complex plane, 293
  - **for initial value problem in the complex plane**, 292
- **testing of software**
  - **for computing functions**, 358
  - **by comparison with existing algorithms**, 358
  - **by extended precision algorithms**, 358
  - **by verification of functional relations**, 358
  - **consistency between different methods**, 358
  - **three-term recurrence relation, see also recurrence relation anomalous behavior**, 118
  - **confluent hypergeometric functions**, 120
  - **exponential integrals**, 121
  - **modified Bessel functions**, 118
  - **backward recursion**, 91
  - **condition of**, 88
  - **dominant solution**, 90
  - **forward recursion**, 91
  - **linear homogeneous**, 87
  - **linearly independent solutions**, 89
  - **minimal solution**, 89, 90
  - **relation with continued fractions**, 95
  - **scaled form**, 94
  - **with constant coefficients**, 92
- **toroidal harmonics**, 363
  - **algorithm**, 366
  - **asymptotic expansion for** \( P_{-1/2}^M(x) \), 368
  - **dual algorithm**, 369
  - **primal algorithm**, 366
  - **recurrence relation**, 367
  - **relation with elliptic integrals**, 367
  - **scaled functions**, 364
  - **series expansion for** \( P_{-1/2}^M(x) \), 367
- **trapezoidal rule**, 350
  - **simple rule**, 124
  - **compound rule**, 126
  - **Euler’s summation formula**, 130
  - **for computing Scorer functions**, 362
  - **for computing the Bessel function** \( J_0(x) \), 128
  - **for computing the Bessel function** \( K_0(x) \), 153
  - **for computing the complementary error function**, 350
