

# APPLIED MATHEMATICS *New Titles!* from **siam**®

## Introduction to Linear Algebra, Fourth Edition

Gilbert Strang

Four fundamental subspaces are a key to this book. To see sections from every part of the course, go to [math.mit.edu/linearalgebra](http://math.mit.edu/linearalgebra). This text accompanies Strang's famous video lectures on [ocw.mit.edu](http://ocw.mit.edu). The new edition includes challenge problems to

complement the review problems that have been highly praised. Years of developing this approach to explaining linear algebra are recorded in the materials on [web.mit.edu/18.06](http://web.mit.edu/18.06).

2009 · x + 574 pages · Hardcover · ISBN 978-0-9802327-1-4  
List Price \$87.50 · SIAM Member Price \$61.25 · Code **WC09**

## Scientific Computing with Case Studies

Dianne P. O'Leary

Learning through doing is the foundation of this book, which allows readers to explore case studies as well as expository material. The book provides a practical guide to the numerical solution of linear and nonlinear equations, differential equations, optimization problems, and eigenvalue problems. It treats standard problems and introduces important variants. Stability and error analysis is emphasized, and the MATLAB® algorithms are grounded in sound principles of software design and in the understanding of machine arithmetic and memory management.

## Elementary Calculus of Financial Mathematics

A. J. Roberts

Modern financial mathematics relies on the theory of random processes in time, reflecting the erratic fluctuations in financial markets. This book introduces the fascinating area of financial mathematics and its calculus in an accessible manner geared toward undergraduate students. Using little high-level mathematics, the author presents the basic methods for evaluating financial options and building financial simulations. Among the topics covered are the binomial lattice model for evaluating financial options, the Black-Scholes and Fokker-Planck equations, and the interpretation of Ito's formula in financial applications. Each chapter includes exercises for student practice.

2008 · xii + 128 pages · Softcover · ISBN 978-0-898716-67-2  
List Price \$59.00 · SIAM Member Price \$41.30 · Code **MM15**

## Linear and Nonlinear Optimization, Second Edition

Igor Griva, Stephen G. Nash, and Ariela Sofer

This book introduces the applications, theory, and algorithms of linear and nonlinear optimization, with an emphasis on the practical aspects of the material. Its unique modular structure provides flexibility to accommodate the varying needs of instructors, students, and practitioners with different levels of sophistication in these topics. The succinct style of this second edition is punctuated with numerous real-life examples and exercises, and the authors include accessible explanations of topics that are not often mentioned in textbooks.

2008 · xxii + 742 pages · Hardcover · ISBN 978-0-898716-61-0  
List Price \$95.00 · SIAM Member Price \$66.50 · Code **OT108**

## Generalized Inverses of Linear Transformations

Stephen L. Campbell and Carl D. Meyer

Generalized (or pseudo-) inverse concepts routinely appear throughout applied mathematics and engineering, in both research literature and textbooks. Although the basic properties are readily available, some of the more subtle aspects and difficult details of the subject are not well documented or understood. This book is an excellent reference for researchers and students who need or want more than just the most basic elements. First published in 1979, the book remains up-to-date and readable; it includes chapters on Markov Chains and Drazin inverse methods.

2008 · xx + 272 pages · Softcover · ISBN 978-0-898716-71-9  
List Price \$68.00 · SIAM Member Price \$47.60 · Code **CL56**

## Introduction to Interval Analysis

Ramon E. Moore, R. Baker Kearfott, and Michael J. Cloud

This unique book provides an introduction to a subject whose use has steadily increased over the past 40 years. An update of Ramon Moore's previous books on the topic, it provides broad coverage of the subject as well as the historical perspective of one of the originators of modern interval analysis. The authors provide a hands-on introduction to INTLAB, a high-quality, comprehensive MATLAB® toolbox for interval computations, making this the first interval analysis book that does with INTLAB what general numerical analysis texts do with MATLAB.

2009 · xii + 223 pages · Softcover · ISBN 978-0-898716-69-6  
List Price \$72.00 · SIAM Member Price \$50.40 · Code **OT110**
