

*Theoretical developments and computational challenges in financial mathematics*

# SIAM Journal on FINANCIAL MATHEMATICS

Brings together works on theoretical developments in financial mathematics as well as breakthroughs in the computational challenges they encompass. By publishing papers of high quality and originality, it serves as an essential resource for academic finance researchers and practitioners alike. The journal offers a conduit for the publication of articles in any of these branches of financial mathematics. It also provides a common platform for scholars interested in the mathematical theory of finance as well as practitioners interested in rigorous treatments of the scientific computational issues related to implementation.

**Linking Optimization Applications, Algorithms,  
Software, and Computational Practice**

# **SIAM Journal on OPTIMIZATION**

Contains research articles on the theory and practice of optimization. The areas addressed include linear and quadratic programming, convex programming, nonlinear programming, complementarity problems, stochastic optimization, combinatorial optimization, integer programming, and convex, nonsmooth and variational analysis. Contributions may emphasize optimization theory, algorithms, software, computational practice, applications, or the links between these subjects.
