## Evaluating Derivatives: *Principles and Techniques of Algorithmic Differentiation, Second Edition*

Andreas Griewank  
and Andrea Walther

This second edition has been updated and expanded to cover recent developments in

applications and theory, including an elegant NP completeness argument by Uwe Naumann and a brief introduction to scarcity, a generalization of sparsity. This volume will be valuable to designers of algorithms and software for nonlinear computational problems.

2008 · xxii + 438 pages · Softcover · ISBN 978-0-898716-59-7

List Price \$73.50 · SIAM Member Price \$51.45 · **Order Code OT105**

## Hidden Markov Models and Dynamical Systems

Andrew M. Fraser

Hidden Markov models (HMMs) are discrete-state, discrete-time, stochastic dynamical systems. In addition to introducing the basic ideas of HMMs and algorithms for using them, this book explains the derivations of the algorithms with enough supporting theory to enable

readers to develop their own variants. This text is appropriate for first-year graduate students with a background that includes courses in probability, linear algebra, and differential equations.

2008 · xii + 132 · Softcover · ISBN 978-0-898716-65-8

List Price \$55.00 · SIAM Member Price \$38.50 · **Order Code OT107**

## Stochastic Processes, Estimation, and Control

Jason L. Speyer  
and Walter H. Chung

The authors discuss probability theory, stochastic processes, estimation, and stochastic control strategies and show how probability can be used to model uncertainty in control and estimation problems. The material is practical and rich

in research opportunities. This book is suitable for first-year graduate students in electrical, mechanical, chemical, and aerospace engineering specializing in systems and control.

2008 · xiv + 383 pages · Softcover · ISBN 978-0-898716-55-9

List Price \$99.00 · SIAM Member Price \$69.30 · **Order Code DC17**

## Elementary Calculus of Financial Mathematics

A. J. Roberts

Mathematical Modeling and Computation 15

This book introduces the fascinating area of financial mathematics and its calculus in an accessible manner geared toward undergraduate students. Using little high-level mathematics, the author presents

the basic methods for evaluating financial options and building financial simulations.

2008 · xii + 128 pages · Softcover · ISBN 978-0-898716-67-2

List Price \$59.00 · SIAM Member Price \$41.30 · **Order Code MM15**

## Linear and Nonlinear Optimization, Second Edition

Igor Griva, Stephen G. Nash,  
and Ariela Sofer

This book introduces the applications, theory, and algorithms of linear and nonlinear optimization, with an emphasis on the practical aspects of the material.

Its unique modular structure provides

flexibility to accommodate the varying needs of instructors, students, and practitioners with different levels of sophistication in these topics.

2008 · xxii + 742 pages · \_\_\_\_\_ cover · ISBN 978-0-898716-61-0

List Price \$95.00 · SIAM Member Price \$66.50 · **Order Code OT108**

## Feedback Systems: *Input-Output Properties*

Charles A. Desoer  
and M. Vidyasagar

Classics in Applied Mathematics 55

This book was the first and remains the only book to give a comprehensive treatment of the behavior of linear or nonlinear systems when they are connected in a closed-loop fashion, with the output of one system forming the

input of the other. The text is appropriate for advanced graduate students and researchers in control theory, dynamical systems, and ordinary and partial differential equations.

2008 · Approx. xx + 264 pages · Softcover · ISBN 978-0-898716-70-2

List Price \$65.00 · SIAM Member Price \$45.50 · **Order Code CL55**
