List of Figures	xi
Conventions	xiii
Preface	xv
I Isolated Solutions	1
1 Polynomial Systems	3
1.1 An Introduction to Polynomial Systems and Their Solution Sets . . .	4
1.2 Mathematical Background*	16
2 Basic Polynomial Continuation	23
2.1 Homotopy Functions	24
2.2 Path Tracking	33
2.3 A User-Defined Homotopy*	35
2.4 Bertini Guide: Basic Continuation	39
3 Adaptive Precision and Endgames	41
3.1 Some Basic Facts	41
3.2 Adaptive Precision	42
3.3 Endgames for Singular Solutions	47
4 Projective Space	55
4.1 Naturally Arising Projective Spaces	56
4.2 Paths to Infinity	59
4.3 Taming Infinity: Homogenization-Dehomogenization	61
4.4 Calculating Infinity: Projective Patches	62
4.5 Multihomogeneous Structures	64
4.6 Numerical Accuracy*	65
4.7 Normalization Effect of Homogenization*	68
5 Types of Homotopies	71
5.1 Multihomogeneous Homotopy	72
5.2 Linear Product Homotopy*	80
5.3 Polyhedral Homotopy*	82

*Sections marked with * are technical in nature or discuss methods not available in Bertini, so they may not be of interest to all readers.

5.4	Regeneration	83
5.5	Examples	90
5.6	Bertini Guide: Multihomogeneous and Regeneration Homotopy . .	100
6	Parameter Homotopies	101
6.1	Parameter Homotopy Basics	102
6.2	Parameter Homotopy in Bertini	104
6.3	Examples	107
6.4	Nonsquare Systems	109
6.5	Nested Parameter Spaces	111
6.6	Symmetry	112
6.7	Advanced Refinements	114
6.8	Bertini Guide: Parameter Homotopy	117
7	Advanced Topics about Isolated Solutions	119
7.1	Sharpening Using Newton's Method During a Homotopy Run . . .	120
7.2	Sharpening Module	121
7.3	Evaluation and Newton Iterations	125
7.4	Parameter Homotopies for Root Sharpening	129
7.5	User-Defined Homotopies	131
7.6	Determining the Rank of a Matrix	135
7.7	Scaling Polynomial Systems	137
7.8	Rounding Errors in Polynomial Construction	138
7.9	Bertini Guide: Newton Iterations and Sharpening	139
II	Positive-Dimensional Solution Sets	141
8	Positive-Dimensional Components	143
8.1	Irreducible Components of an Algebraic Set	144
8.2	Witness Sets and the Numerical Irreducible Decomposition	150
8.3	Sampling a Component	157
8.4	Membership Testing	157
8.5	A Brief Note on the Expected Accuracy of Coefficients	158
8.6	Bertini Guide: Positive-Dimensional Solving	159
9	Computing Witness Supersets	161
9.1	Rank of a System	162
9.2	Randomization and Bertini's Theorem*	163
9.3	Working Dimension by Dimension	165
9.4	Cascade Methods	167
10	The Numerical Irreducible Decomposition	171
10.1	Junk Removal	171
10.2	Pure-Dimensional Decomposition	173
11	Advanced Topics about Positive-Dimensional Solution Sets	179
11.1	Printing a Witness Set	179
11.2	Computing Specific Codimensions	181
11.3	Multiplicity*	184
11.4	Macaulay Dual Spaces*	186

11.5	Local Dimension and Mechanism Mobility	187
11.6	Deflation of Irreducible Components	189
III	Further Algorithms and Applications	193
12	Intersection	195
12.1	Intersecting Irreducible Components	196
12.2	Regeneration Extension	202
12.3	Generalized Intersection	203
12.4	Fiber Products	203
13	Singular Sets	209
13.1	Rank-Dropping Conditions	210
13.2	Isosingular Sets*	214
13.3	Bertini Guide: Isosingular Stabilization Test	221
14	Real Solutions	223
14.1	Real versus Complex Dimension	224
14.2	Isolated Solutions	225
14.3	Certification of Nonsingular Isolated Real Roots	226
14.4	Cell Decomposition of the Real Solution Set	227
14.5	A Point on Each Connected Component	237
14.6	Real Numerical Irreducible Decomposition*	240
14.7	Software Summary	241
15	Applications to Algebraic Geometry	243
15.1	Invariants	243
15.2	Secant Varieties	245
15.3	Developing and Testing Conjectures	246
15.4	Symbolic versus Numerical Computation	248
16	Projections of Algebraic Sets	251
16.1	Technical Details on Constructible Sets and Slicing*	252
16.2	Pseudowitness Sets	253
16.3	Membership Tests Using Pseudowitness Points	256
16.4	Decomposing Images of Algebraic Sets	258
16.5	Further Applications of Pseudowitness Sets*	259
16.6	Bertini Guide: Computing Pseudowitness Sets	260
17	Big Polynomial Systems Arising from Differential Equations	261
17.1	Polynomial Systems from Discretizing Differential Equations	262
17.2	Computing Solutions to Big Polynomial Systems	266
17.3	Software Summary	269
IV	Bertini Users Manual	271
A	Bertini Quick Start Guide	273
A.1	Installing Bertini	273
A.2	The First Run	273

A.3	Basic Format for Input Files	274
A.4	Declaring Variables and Subfunctions	275
A.5	Positive-Dimensional Examples	276
A.6	User-Defined and Parameter Homotopies	277
B	Input Format	281
B.1	Syntax for Input Files	281
B.2	The <code>start</code> File	286
B.3	Other Input Files	287
B.4	Command-Line Input for Sampling and Sharpening	288
C	Calling Options	289
C.1	Basic Bertini Calls	289
C.2	Interactive Modes	289
C.3	Automation of Bertini Calls	291
D	Output Files	293
D.1	Zero-Dimensional Runs	293
D.2	Positive-Dimensional Runs	296
E	Configuration Settings	301
E.1	Track Type Settings	301
E.2	Multiple Precision Settings	304
E.3	Adaptive Precision Settings	305
E.4	Tracker Settings	306
E.5	Endgame Settings	309
E.6	Security Settings	311
E.7	Postprocessing Settings	312
E.8	User-Defined and Parameter Homotopy Settings	314
E.9	Numerical Irreducible Decomposition Settings	315
E.10	Regeneration Settings	317
E.11	Miscellaneous Settings	319
F	Tips and Tricks	323
F.1	Formulating Polynomial Systems	323
F.2	Solving Tips	325
F.3	Additional Postprocessing	327
G	Parallel Computing	329
H	Related Software	331
H.1	Interfaces between Bertini and Other Software	331
H.2	Modules Using Bertini as a Library	332
H.3	Software Packages Similar to Bertini	332
	Bibliography	335
	Software Index	347
	Subject Index	349
