# MULTISCALE MODELING & SIMULATION

*A SIAM Interdisciplinary Journal Communicating Across All Sciences*

Launched in 2003, MMS features research articles that focus on the fundamental modeling and computational principles underlying various multiscale methods. Multiscale modeling is highly interdisciplinary, with developments occurring independently across fields. Research papers and survey articles that augment the fundamental ways we model and predict multiscale phenomena are featured. Particularly emphasized is the interplay between analysis and modeling, modeling and simulation, and mathematics and various applications. Papers bridge the gap in multiscale research between mathematics and various application disciplines, including biology, chemistry, engineering, environmental science, fluid dynamics, geophysics, information science, materials science, and physical science.

**Publication information**

ISSN: 1540-3459 (print) / 1540-3467 (electronic)

Frequency: print: quarterly / electronic: continuous

Year established: 2003

Available formats: print (6" x 9"), online

2012 volume number: 10

**2012 Rates**

Print with electronic access: \$493 USA, Canada, Mexico / \$574 overseas

Electronic-only access: \$468.35

**For more information on SIAM and  
Multiscale Modeling & Simulation, contact:**
