SIAM Journal on

SCIENTIFIC COMPUTING

Computational Results for Scientific and Engineering Problems

Contains research articles on numerical methods and techniques for scientific computation. Papers address computational issues relevant to the solution of scientific or engineering problems and include computational results demonstrating the effectiveness of the proposed techniques.

A new look, with three distinct sections in each issue, is seen in published issues starting with Volume 34 in 2012. The editors ask that authors state at submission in which of the three categories their work fits best.

The sections are:

Methods and Algorithms for Scientific Computing. Papers in this category may include theoretical analysis, provided that the relevance to applications in science and engineering is demonstrated. They should contain meaningful computational results and theoretical results or strong heuristics supporting the performance of new algorithms.

Computational Methods in Science and Engineering. Papers in this section will typically describe novel methodologies for solving a specific problem in computational science or engineering. They should contain enough information about the application to orient other computational scientists but should omit details of interest mainly to the applications specialist.

Software and High-Performance Computing. Papers in this category should concern the development of high quality computational software, high-performance computing issues, novel architectures, data analysis, or visualization. The primary focus should be on computational methods that have potentially large impact for an important class of scientific or engineering problems.

Publication information

ISSN 1064-8275 (print) / 1095-7197 (electronic)

Frequency: print: bimonthly / electronic: continuous

Year established: 1980

Available formats: print (6" x 9"), online

2012 volume number: 34

2012 Rates

Print with electronic access: \$847 USA, Canada, Mexico / \$987 overseas

Electronic-only access: \$804.65
