Published research articles on numerical methods and techniques for scientific computation. Papers address computational issues relevant to the solution of scientific or engineering problems and include computational results demonstrating the effectiveness of the proposed techniques. There are three distinct sections in each issue.

**Methods and Algorithms for Scientific Computing.** Papers may include theoretical analysis, provided that the relevance to applications in science and engineering is demonstrated. They should contain meaningful computational results and theoretical results or strong heuristics supporting the performance of new algorithms.

**Computational Methods in Science and Engineering.** Papers will typically describe novel methodologies for solving a specific problem in computational science or engineering. They should contain enough information about the application to orient other computational scientists but should omit details of interest mainly to the applications specialist.

**Software and High-Performance Computing.** Papers should concern the novel design and development of computational methods and high-quality software, parallel algorithms, high-performance computing issues, new architectures, data analysis, or visualization. The primary focus should be on computational methods that have potentially large impact for an important class of scientific or engineering problems.

**SISC is published article by article at epubs.siam.org/sisc**

ISSN: 1064-8275 (print) / 1095-7197 (electronic)
Frequency: electronically published continuously
Year established: 1980 / Formats: electronic and print
2020 volume number: 42
2020 rates: electronic only $1,155 / print add-on $343
